SharePoint

## Reflex Reporting 2013 Uninstall Guide

Author: Michael Bear

Date: 15 Oct 2018

Version: 1.0

## Overview

This document describes the steps to uninstall ThorApps Reflex Reporting 2013 from a SharePoint 2013 farm.

## Prerequisites

To follow this guide, you will need the following items:

- A computer with internet access
- Remote console access to the server hosting SharePoint Central Administration (directly or via remote desktop)
- SharePoint farm administrator rights with to deploy SharePoint farm solutions.

## Un-installing Reflex Reporting

On the server hosting SharePoint Central Admin, open Central Admin from the start menu (to ensure it is opened as an administrator).

Click "Manage farm features" under the System Settings menu group.

The SharePoint Health Analyzer has detected some critical issues that require your attention. [View these issues.](#)

Application Management

- Manage web applications
- Create site collections
- Manage service applications
- Manage content databases
- Reporting Schemas

System Settings

- Manage servers in this farm
- Manage services on server
- Manage farm features**
- Configure alternate access mappings

Backup and Restore

- Perform a backup
- Restore from a backup
- Perform a site collection backup

Monitoring

- Review problems and solutions
- Check job status

Security

- Manage the farm administrators group
- Configure service accounts

Upgrade and Migration

- Convert farm license type
- Check product and patch installation status
- Check upgrade status

Locate "Reflex Reporting".

Click "Deactivate".

Project Integration Engine

The Project Integration Engine will process a variety of Entity Types into a Microsoft Office Project Server Project Web App Instance. Use the Project Integration Engine to Create, Update or Delete Projects, Resources, Project Tasks, Project Task Assignments, Lookup Tables and Task Updates.

Reflex Reporting

Mirrors SharePoint lists into SQL tables to make the generation of reports easy. Also allows the use of SQL constraints to validate user input into SharePoint lists (i.e. multiple column uniqueness, or prevent deletion where records are related).

SharePoint Server to Server Authentication

This feature provides the server to server authentication capabilities.

Deactivate Active

#### Solution Information

Information on the solution you have chosen to retract.

Name:	thor.spf.reflexreporting.wsp
Locale:	0
Deployed To:	Globally deployed.
Deployment Status:	Deployed

#### Retract When?

A timer job is created to retract this solution. Please specify the time at which you want this solution to be retracted.

#### Choose when to retract the solution:

☒ Now

☐ At a specified time:

10/15/2018 12 PM 00

#### Retract From?

The solution contains no Web application scoped resource, and therefore cannot be retracted from a particular web application. It can only be retracted globally.

This solution should be retracted globally.

OK

Cancel

Wait for the SharePoint to complete retracting the solution.
