Reflex Reporting 2013 Installation Guide

Author: Michael Bear

Date: 29 Sept 2018

Version: 2.0

Overview

This document describes the steps to install ThorApp's Reflex Reporting 2013 into a SharePoint 2013 farm.

Prerequisites

To follow this guide, you will need the following items:

- A computer with internet access
- Remote console access to the server hosting SharePoint Central Administration (directly or via remote desktop)
- SharePoint farm administrator rights, to deploy SharePoint farm solutions.

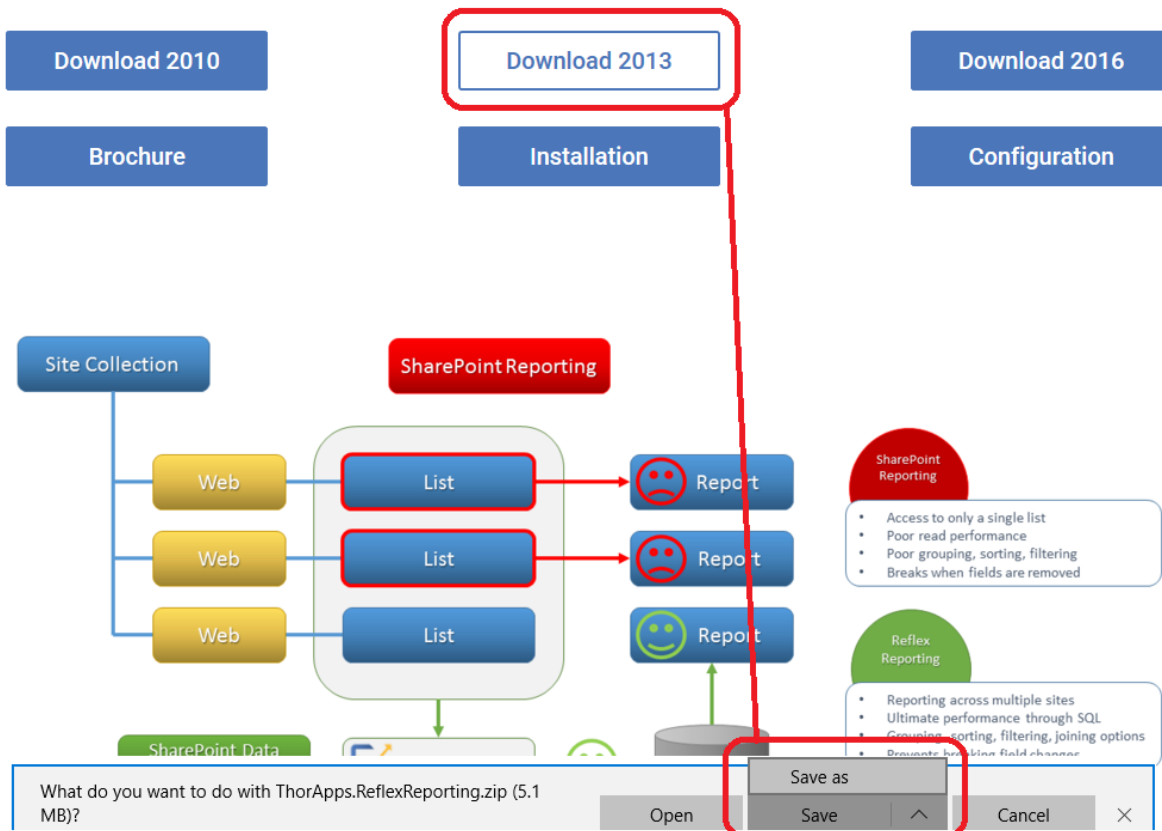

Step 1

On your local machine in your preferred browser, navigate to <https://www.thorapps.com/apps/reflex-reporting/>

Click "Download 2013".

Your browser may prompt you to download the file ThorApps.ReflexReporting.zip

Take note of where you save this package.

Step 2

Move the saved package onto the server hosting SharePoint Central Administration. There are multiple ways to do this. This guide will use a remote desktop connection to the server hosting SharePoint Central Administration.

Open a connection with Remote Desktop Connection.

In the server, open File Explorer and navigate to the C: Drive.

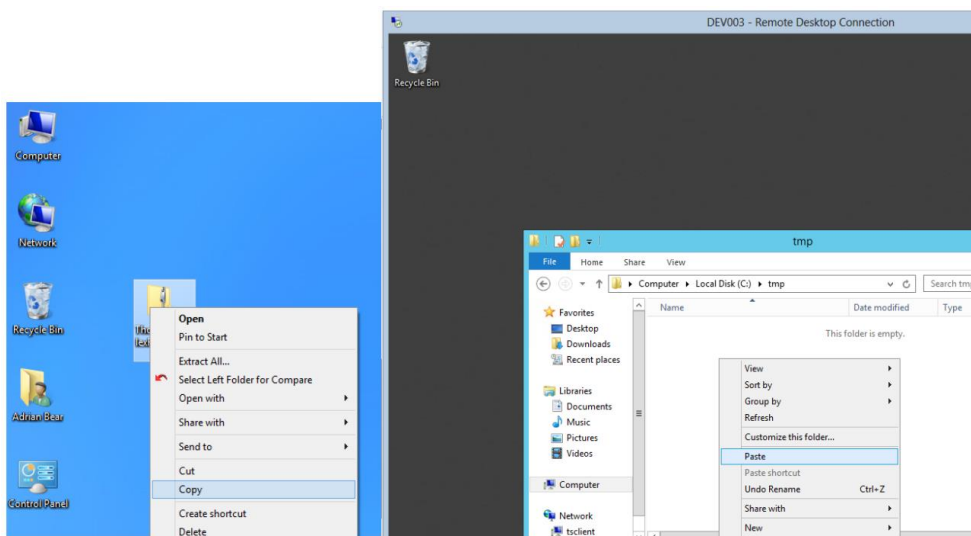

Navigate into a folder called 'Temp'.

If this folder does not exist, create it.

In your local machine, navigate to where you saved the download package.

Copy this package to your clipboard. (Ctrl + C)

In the server, paste the package into the 'Temp' folder. (Ctrl + V)

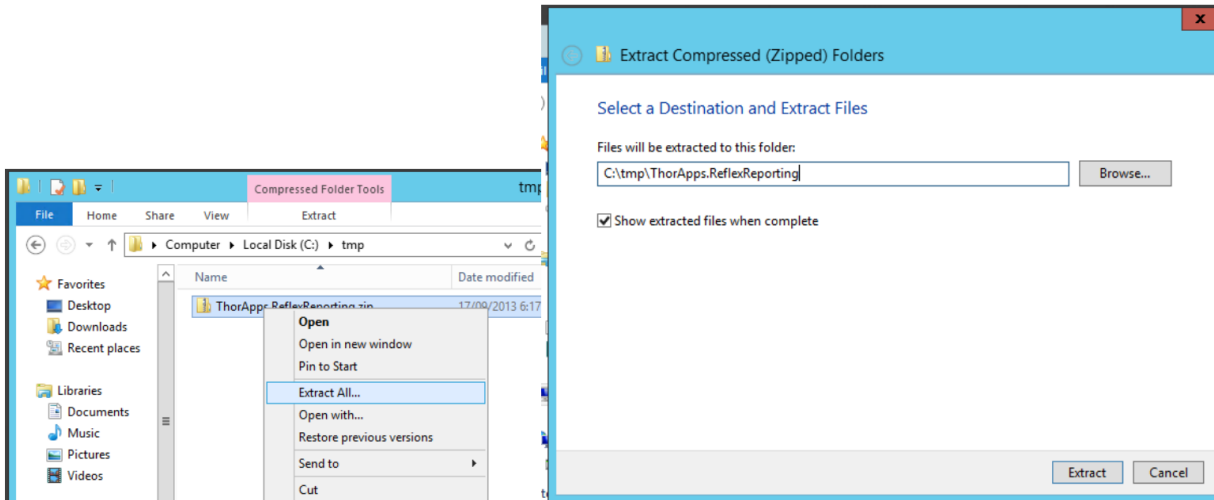

Step 3

In the server hosting SharePoint Central Administration, right click on the package.

Select "Extract All".

Click "Extract" when the Extract Compressed Folders prompt appears.

Step 4

After extracting, you will be presented with the contents of the zip file.

Click on the Windows Start menu and type "SharePoint". Find and right click on "SharePoint 2016 Management Shell" and select "Run as administrator".

Enter the following command:

```
Add-PSSnapin Microsoft.Sharepoint.Powershell -EA 0
```

Enter the following command:

```
Add-SPSolution -LiteralPath  
C:\Temp\ThorApps.ReflexReporting\ThorApps.ReflexReporting.ForSP2013\Thor.SPF.LicenseManager.wsp
```

Once installed, the shell will display the Solution Name, Id and Deployed status.

Enter the following command:

```
Add-SPSolution -LiteralPath  
C:\Temp\ThorApps.ReflexReporting\ThorApps.ReflexReporting.ForSP2013\Thor.SPF.ReflexReporting.wsp
```

Again, once installed, the shell will display the Solution Name, Id and Deployed status.

So what's next?

Deployment

Now that you have installed Reflex Reporting 2013, the next step is to deploy it. Follow the Deployment Guide included in your download package.

Purchasing

If you have completed installation and configuration and have decided to purchase a license, follow the Purchasing Guide included in your download package.

License Activation

If you already have a license for Reflex Reporting 2013 and wish to activate it, follow the License Activation Guide included in your download package.
